

# Orficast™ Thermoplastic Tape

Extremely comfortable  
for your patient

# ORFICAST™ THERMOPLASTIC TAPE

## Recommended Applications

- Perfect to use in case of traumatic and orthopaedic conditions which require quick and easy immobilization orthoses.
- Recommended also as first aid product in casting rooms and operating theatres. All types of immobilization finger orthoses, and hand based wrist and thumb orthoses.
- Precise modelling and snug fit prevent pressure points.
- Allows to fabricate static progressive orthoses to regain range of motion.
- Also recommended to use in case of fragile skin, for example for patients suffering a poly-arthritic condition.
- Fabrication of larger orthoses will require dry heat for bonding.

The seams from overlapping that are visible on the outside are not perceptible on the inside which gives Orficast a very soft surface to the touch

## Characteristics

### How it works and looks

- Thermoplastic knitted textile on a roll. Tape roll allows to use circumferential wrapping and moulding technique. Time saving. No need to make pattern.
- Comes in different widths and colours. Perfect size widths (3 cm and 6 cm) for small and larger orthoses. Can accommodate different sized fingers and different orthotic designs. Available in black and blue.
- Excellent elasticity in two directions. Allows precise modelling conform to the patient anatomy, for example the webspace.
- Excellent memory (lengthwise). Orthoses can be remoulded when corrections are needed. Avoids waste of material.
- Thin and breathable fabric material. Soft touch feeling and smooth edges. Lightweight. Allows ventilation. Prevents maceration of the skin. Excellent patient comfort and compliance.
- Easy to cut. Allows to easily cut small pieces to use as reinforcement of the orthoses when desired.
- Self-adhesive capacity, especially when dry heated. Overlapping seams are not perceptible on the inside. Application of multiple layers raises rigidity and stability of the orthoses
